

Using a data-driven approach to support recovery from COVID-19

At the Health Foundation, we see the potential for a health care system that continually learns from data, with the experiences and outcomes of every patient being used to improve care for future patients.

Ensuring everybody benefits from the use of health data

Health data have played a critical role during the pandemic. But despite the great strides forward, our health system is a long way from using data optimally. Our Director of Data Analytics, Adam Steventon, looks at what will enable a data-driven approach to health to flourish.

Briefing: Adult social care and COVID-19 after the first wave

A key question for any future inquiry into the government's handling of COVID-19 will be how well government protected people using and providing adult social care. We look at the policy response in England after the first wave of COVID-19.

Weathering the storm? The pandemic's impact on young people's wellbeing

As the immediate danger of the virus to older people thankfully diminishes, focus is shifting to groups who have had their health suffer in a different way. Martina Kane looks how the pandemic has affected young people's mental health, and what society can do to help.
